## Specifications:

- 60L capacity (per bin)
- CAD files available
- NZ Pat 620337
- NZ Reg Des 418203
- AUS Reg Des 11087/2014
- Made from polypropylene

## Product Features:

- Closed (push to open) lid available shortly for Landfill + Organics
- Modular Design - choose from 1-4 bins to suit your recycling streams
- Connectors lock bins together to form one station
- Bin liner locked into place with patented mechanism
- New Zealand designed + made
- Implementation information provided

## Benefits of Open Plan Recycling:

- Standalone bins provide flexibility - streams and number of bins can be changed as your workspace grows
- Visible bins - promote environmental awareness and engage staff in your environmental policy
- Fewer desk bins to empty - save cleaning time and cost
- Avoids cabinetry - inflexible and expensive
- Create a new perception of recycling - be proud of your bins

recycling is a beautiful thing

## Method - Our Story:

Steven and India Korner are from design disciplines which drive the core values of Method. They provide beautiful products that work to make recycling a simple, stylish part of the modern office.

Keen to have their own business the Korners bought Total Bins in 2011. Based in the Wairarapa and Wellington they travelled New Zealand in a van selling wheelie bins, bags and recycling labels to supermarkets, rest homes, holiday parks, schools and business - from bins for the Curly Tree Whitebait Company in Haast to sanitiser to retirement homes in Auckland.

India and Steve were surprised at the poor quality of recycling solutions available for modern offices. They saw sophisticated corporate environments where the recycling system was an afterthought - in conflict with the aesthetic created by architects and designers.

Ugly bins were hidden in cupboards or in the kitchen. Despite recycling at home few made the transition to recycling at work although many companies prided themselves on being sustainable.

Steven harnessed his expertise in ergonomics and plastic design and got to work. His five years at Fisher and Paykel Healthcare, leading a team designing award winning products, provided insight into the design and production process required to produce the perfect bin.

India drew on her experience in business and design. With a Graphic Design degree from Massey, she worked in Commercial Leasing at Colliers Auckland where she saw the beginning of a global move towards corporate sustainability and the creation of the New Zealand Green Building Council.

Steve and India at Method have spent three years designing the perfect office recycling bin: a beautiful, functional solution for recycling and rubbish.

Designed to simplify the process of recycling - **ENJOY!**
